

exprtk::details::make
_memory_context

exprtk::details::exprtk
_final::vec_binop_vecvec_node

exprtk::details::vector
_holder::base_size

```
graph LR; A["exprtk::details::make_memory_context"] --> C["exprtk::details::vector_holder::base_size"]; B["exprtk::details::exprtk_final::vec_binop_vecvec_node"] --> C;
```

The diagram illustrates a flow or dependency where two separate components on the left converge into a single target on the right. The first component, 'exprtk::details::make_memory_context', is located in the upper left. The second component, 'exprtk::details::exprtk_final::vec_binop_vecvec_node', is located in the lower left. Both components have a blue arrow pointing towards a central box on the right, 'exprtk::details::vector_holder::base_size'. The target box is shaded gray, while the source boxes are white with black borders.
