

getAST

```
graph LR; A[getAST] --> B[CellExtractor::foundTargetCell]
```

A diagram showing a call from the `getAST` function to the `CellExtractor::foundTargetCell` method. The `getAST` node is a gray rectangle on the left, and the `CellExtractor::foundTargetCell` node is a white rectangle with a black border on the right. A blue arrow points from the right side of the `getAST` node to the left side of the `CellExtractor::foundTargetCell` node.

CellExtractor::foundTargetCell
